

...ensures security for your business

**LEADERSHIP IN
INFORMATION SECURITY**

nSure metamorphosed into information security services in 2006. It has since partnered with leading companies in information security to offer end-to-end solution to its customers.

Products

Consulting

- Information Security Audit
- Network performance Optimization
- Vulnerability Assessment / PenetrationTesting
- Application Security testing
- ISO 27001 consulting
- Computer Forensics

Information Assets

HOW DO YOU PROTECT VALUABLE INFORMATION ASSETS?

Today, technology-driven organizations rely on a sophisticated network of computers and peripherals to create, manage, process, share and archive information. Whether in electronic or paper form, this information is vulnerable to technical, physical and human threats (illustrated above). In order to protect information assets – the lifeblood of every business – IT (Information Technology) departments must build a secure infrastructure.

By implementing security measures, you prevent abuse of office equipment resources and information leaks, and thus minimize exposure to negative business forces—forces that can otherwise result in diminished competitiveness, eroding client and shareholder trust, increase in cost and even costly litigation.

NSURE SERVICES

Information Security Consulting

As organizations increasingly use the Internet to take advantage of its global reach, new security controls relating to process and technologies will need to be deployed and securely managed. An Information Security Audit will involve creation of threat list, vulnerability assessment, and network access controls in place, Protection mechanism, Identity, access, and prevention mechanism along with Backup solution. Our Internet Security Services deliverable provide a comprehensive, framework for managing an organization's Internet security and privacy controls consistent with business objectives.

"Cyberoam maximizes Return over Investment. We are fully satisfied with Cyberoam Unified Threat Management solution."

Mr. Avnesh Jain
Sr. Manager, Information Systems
Hero Honda Motors Limited

Cyberoam

Cyberoam is the only identity-based UTM, worldwide offering intelligent threat management to enterprises.

This approach leaves no loopholes in the network nor does it involve expensive, difficult-to-manage duplications that raise the cost of purchase,

Cyberoam offers complete Internet security system with Firewall, Anti-Virus, Anti-Spam, Content & Application Filtering, Intrusion Prevention System, Content & Application Filtering in addition to Bandwidth Management and Multiple Link Management over a single platform.

Cyberoam has been the winner of InfoSecurity Products Guide 2007 Global Excellence Awards for Integrated Security Appliance,

"User friendly, not expensive backup solution compared to others sophisticated and more expensive. It's fit for purpose for small organizations."

Tomasz Kiepek
Texaco Lubricants Polska - Poland
Hero Honda Motors Limited

SecureSynergy

Secure Synergy, an ISO 27000 company is empanelled auditor of CERT-In. It received Frost & Sullivan Market Leadership award for Managed Services 2007 – third year in a row! It is one of the few empanelled auditor for national certifying authority, securing India's PKI.

"I just wanted to thank you guys for such an excellent program and more over such wonderful support in the process of setting up and determining if this product was right for us."

Justin Creamer, Australia

BackupAssist

Cortex is a global leader for developing data backup solutions for small and medium segment. BackupAssist makes backups and data protection simple by performing automatic, scheduled backups of Windows Servers.
